Profile

Computer Engineering graduate currently pursuing an MSc in Data Science at the University of Greenwich, with practical experience in data analysis, SQL, Python, Power BI and database technologies. Experienced in developing interactive dashboards, analysing datasets and building an end-to-end stock market ETL pipeline using Python, APIs and PostgreSQL. Strong foundation in data extraction, transformation, visualisation and database management, complemented by experience in software development and AI/NLP applications.

Experience

Infotact Solutions, India **Oct-Nov 2025**

Data Analytics Intern

- **Analyzed data** using Python, SQL, and Excel, and **built dashboards** in BI Tools to support decisions; automated reporting workflows to save time and improve accuracy.

Excelerate, Global **June-July 2025**

Data Visualization Intern

- I completed a **Global Internship with Excelerate,** where I worked on **data analysis and visualization** projects. This experience allowed me to explore real-world datasets, uncover insights, and present them through clear visual stories. Along the way, I strengthened my problem-solving, analytical thinking, and communication skills while collaborating in a global, cross-cultural environment.

PROJECTS

Stock Market ETL Data Pipeline ||Python — yfinance — Pandas — PostgreSQL

- Developed an end-to-end stock market data pipeline to implement the Extract, Transform and Load (ETL) process.Extracted stock market data through the yfinance API using Python and processed the retrieved datasets with Pandas.Transformed raw market data into structured datasets suitable for storage and downstream analysis.Loaded processed data into PostgreSQL to create a structured database for querying and analytical use.Implemented separate extraction and loading stages to understand modular data pipeline architecture and workflow.Applied Python, API integration, data transformation and relational database concepts throughout the pipeline

Apple-iTunes-Music-Analysis ||SQL

- This project analyzes the Apple iTunes music dataset using SQL to derive key insights about tracks, artists, and customer purchases. I wrote optimized SQL queries involving joins, aggregations, and filtering to identify trends such as top genres and spending behavior. The project also includes designing relationships and improving database structure for efficient querying. It highlights my ability to work with real-world data and apply strong SQL and analytical skills.

Mental_Health_in_Tech_EDA ||Python for Data Analysis & Cleaning

- Used Python, Seaborn, and Matplotlib to conduct a thorough EDA on mental health in the tech sector; produced more than 15 powerful charts with insights geared toward business and code that was ready for deployment. Patterns in treatment-seeking behavior, workplace support, and demographic trends were identified to inform recommendations for mental health policies.

TECHNICAL SKILLS

Languages: MySQL, PostgreSQL, Python, R, C
Tools: Power BI, Excel
Databases: PostgreSQL, SQL Database

EDUCATION

University of Greenwich **Persuing Currently**
MSc Data Science *London , UK*

LDRP Institute of Technology and Research **2022 – 2026**
B.Tech - Computer Science and Engineering - ***CGPA - 7.39*** *Gandhinagar , Gujarat*

CERTIFICATIONS

- Finished a 20-hour **practical SQL course on Udemy** that included interactive exercises. Learned how to use real-world examples to write and optimize SQL queries.
- Python for Data Science-**NPTEL.**
- **TATA & Forage** issued the Certificate in **Data Visualization:** Empowering Business with Effective Insights in March 2025.
